

ADMINISTRATIVO

Roadmap: Q4 2026 to Q4 2028

HR & administration SaaS for Romanian SMEs · administrativo.ro · pre-seed application to Vest Ventures · status as of 6 Oct 2026

Notes. Done items are verified against the code repository and the live product, or are founder data such as search and pilot figures (6 Oct 2026). Product items with a hollow diamond close known gaps (billing, app-store publication, larger-company pricing); their dates are the founders' plan. Every dated item after 6 Oct 2026 is a plan or a projection, not a commitment. Customer counts are projections from the base scenario of the financial model (financial-model.xlsx); the base scenario reaches 71 / 212 / 448 paying companies at months 12 / 24 / 36, the conservative scenario 47 / 139 / 284 and the upside scenario 103 / 313 / 682. Our ambition for 2031, beyond the model, is 2,000 paying companies. On the base plan the €100k round reaches 100 paying customers in Apr 2028 and monthly break-even in Dec 2028 without further funding; the seed accelerates growth. The conservative scenario reaches 100 paying customers in Aug 2028 with little cash left and needs the seed then. The developer and the penetration test come after the seed; the co-founders take no salary in 2027. The January 2027 close is an assumption, because the Vest Ventures Accelerator Cohort 3 dates are not published. REGES-Online is the Romanian Labour Inspectorate's (ITM) mandatory electronic employee register; SSM is occupational health & safety. Payroll is built end to end, but its legal values are being validated by an accountant; until then it is not offered to pilot or paying customers as production-ready, although the public price list already shows it.
