

Cap table: today and pro-forma

€150k pre-seed at €1.25M pre-money · as of 6 October 2026

Issuer [TO CONFIRM]: WISELEARNING S.R.L., CUI 50321210, J35/2618/2024, Timișoara (Timiș county), the operator named on administrativo.ro. To confirm: the founders' 51/49 holding in it, its share capital and social parts, and its activity from 2024 to Aug 2026.

1. Today

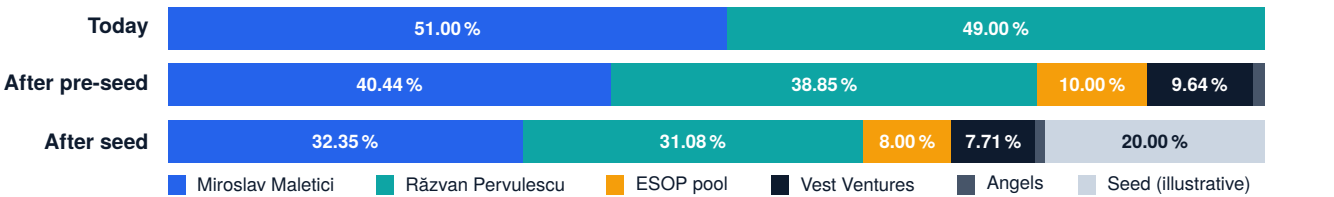

Miroslav Maletici, co-founder: **51.00 %** **Răzvan Pervulescu**, co-founder: **49.00 %** Total 100.00 %
Romanian limited-liability company (SRL).¹ No investors, no options issued. Both co-founders write the product's code.

2. Proposed pre-seed round

Round size	€150,000: €135,000 Vest Ventures Accelerator ticket + €15,000 from independent angels (none identified yet): 10 % of the round, 11 % of the VV ticket, so the 10 % match holds.
Valuation	€1,250,000 pre-money, €1,400,000 post-money, fully diluted. Founders' proposal: we found no sourced Romanian or CEE pre-seed valuation benchmark.
Investors after the round	10.71 % (Vest Ventures 9.64 %, angels 1.07 %)
Option pool (ESOP)	10 % of post-money, created pre-money (dilutes founders only). Shown as equity for comparability; under the SRL a cash-settled phantom pool, real options after the SA conversion [TO CONFIRM].
Founder vesting	Proposed 4-year vesting, 1-year cliff, standard leaver terms (VV templates) [TO CONFIRM].
Instrument	Convertible loan agreement (CLA) or shareholders' agreement (SHA) on Vest Ventures' templates. Modelled here as priced equity; a CLA would use €1,250,000 as its valuation cap.

3. Ownership before and after

Holder	Today	After pre-seed	After seed ²	Invested (€)
Miroslav Maletici, co-founder	51.00 %	40.44 %	32.35 %	—
Răzvan Pervulescu, co-founder	49.00 %	38.85 %	31.08 %	—
ESOP pool (unallocated)	—	10.00 %	8.00 %	—
Vest Ventures	—	9.64 %	7.71 %	135,000
Independent angels	—	1.07 %	0.86 %	15,000
Seed investors (illustrative)	—	—	20.00 %	1,000,000
Founders combined	100.00 %	79.29 %	63.43 %	
Post-money valuation (€)	—	1,400,000	5,000,000	

4. If the round is a convertible loan instead

A CLA of the same €150,000 with the priced pre-money (€1,250,000) as its cap, no interest and the same 10 % pool gives the founders the **same 63.43 %** after the illustrative seed: the cap price is below the discounted seed price, so the illustrative 20 % discount plays no part. A CLA is not founder-friendlier: interest or a binding discount would dilute the founders further. The “CLA alternative” sheet of cap-table.xlsx shows the conversion step by step, with the same pool units as the priced round. Terms follow Vest Ventures' templates [TO CONFIRM]. A €220,000 round (the €200,000 maximum VV ticket plus the minimum 10 % match) would mean 15.0 % dilution at the same pre-money.

¹ **Why the company changes form at this round.** In an SRL, any amendment of the articles, including each capital increase for a new investor, needs the vote of *all* associates unless the articles say otherwise (art. 192). We plan to convert to a joint-stock company (SA) or a holding at this round: majority votes in an extraordinary general meeting, shares that transfer through the register, and an option plan that works naturally; an SA needs a minimum share capital of RON 90,000 (art. 10) and auditors or censors. If the company stays an SRL at signing, the same act allows majority decisions (for example 3/4 of capital) and drag-along. Source: Legea 31/1990 privind societățile (Companies Law), on legislatie.just.ro. Legal and tax steps [TO CONFIRM] with a lawyer and an accountant.

² **Illustrative seed:** €1,000,000 at €4,000,000 pre-money (€5,000,000 post-money), no top-up of the option pool; not a plan and not a commitment. Percentages are rounded to two decimals, so a column may not add up to exactly 100.00 %. Sources: cap-table.xlsx (sheets “Cap table” and “CLA alternative”) and financial-model.xlsx.

Pro-forma, not a signed deal. No investor has committed. The seed column is illustrative only: no seed discussion has taken place.
